

CHORE-TIME[®]

PIGCENTRAL[®] CONTROL

- ▶ Improves and optimizes barn environment
- ▶ Designed for power, tunnel and natural ventilation
- ▶ Monitors and analyzes data trends

PIGCENTRAL® CONTROL FEATURES:

15" TOUCH SCREEN

Take control with the PIGCENTRAL® Control 15-inch (381 mm) touch-screen. Our military grade display module is optically bonded for increased life and visual brightness. Spend less time setting up your control and more time running your operation. See at a glance what devices are running and which devices will run next. Menus organized by user role help streamline operation and make navigation intuitive. Eye-catching status lights indicate control warnings and urgency level.

REMOTE CONTROL

Be connected to your control like never before. Our industry-leading tunneling feature allows you to view and operate the control from nearly any computer.* From within your account, you can view the high level status of each individual room and drill down for more detail and take any action needed.

POWERFUL ALARMS

Managed alarms give you one less thing to remember today. Configure alarms to be delivered to different users or groups of users. Group alarms will roll through the user list until acknowledged and then a resolution timer starts. If the alarm is not resolved before the timer expires, it will reactivate and move to the next user. Using Chore-Time's smartphone app, alarm notifications display prominently on the screen. From the app, view sensor and device status, see current and historical alarms and bump alarms to the next responder.

SCRIPTING ENGINE

Have a unique idea or configuration not directly supported in the control? With this PIGCENTRAL® Control's powerful scripting engine, you can do almost anything based on IFTTT (If, This, Then, That) principles. Simply create a script from a list of available inputs and outputs stating: "If selected input does this, then set output to that."

PERMISSION LEVELS

Six defined user levels keeps your control on lockdown from accidental and malicious changes. Define each user's maximum level of ability to align with their job requirements. Use a 4-digit PIN or RFID card to quickly log in with your permission level setting.

HISTORICAL DATA

Understand your barn environment in a whole new way. View historical data of settings, devices and sensors to see true cause and effect changes. Use this data to make repairs and refine settings.

CHAIN DISC

Your animals will be fed on time every day with the integrated controller for Chore-Time's Chain Disc Feed Delivery System. There is a built in process log to troubleshoot mechanical problems. It also has remote start capability for extra feedings.

BIN SLIDE CONTROLLER

The next full feed bin is always just a button push away. This PIGCENTRAL® Control will activate the feed bin boot slide actuators to open the next bin and automatically close the previous one for full clean out capability.

*Requires internet connection.
